Beginning in 1985, one section is devoted to a special topic  
An expert guide to the new and emerging field of broadband  
circuits for optical fiber communication This exciting publication  
makes it easy for readers to enter into and deepen their knowledge of  
the new and emerging field of broadband circuits for optical fiber  
communication. The author's selection and organization of material  
have been developed, tested, and refined from his many industry  
courses and seminars. Five types of broadband circuits are discussed  
in detail: \* Transimpedance amplifiers \* Limiting amplifiers \*  
Automatic gain control (AGC) amplifiers \* Lasers drivers \*  
Modulator drivers Essential background on optical fiber,  
photodetectors, lasers, modulators, and receiver theory is presented

to help readers understand the system environment in which these broadband circuits operate. For each circuit type, the main specifications and their impact on system performance are explained and illustrated with numerical values. Next, the circuit concepts are discussed and illustrated with practical implementations. A broad range of circuits in MESFET, HFET, BJT, HBT, BiCMOS, and CMOS technologies is covered. Emphasis is on circuits for digital, continuous-mode transmission in the 2.5 to 40 Gb/s range, typically used in SONET, SDH, and Gigabit Ethernet applications. Burst-mode circuits for passive optical networks (PON) and analog circuits for hybrid fiber-coax (HFC) cable-TV applications also are discussed. Learning aids are provided throughout the text to help readers grasp and apply difficult concepts and techniques, including:

- \* Chapter summaries that highlight the key points
- \* Problem-and-

answer sections to help readers apply their new knowledge \* Research directions that point to exciting new technological breakthroughs on the horizon \* Product examples that show the performance of actual broadband circuits \* Appendices that cover eye diagrams, differential circuits, S parameters, transistors, and technologies \* A bibliography that leads readers to more complete and in-depth treatment of specialized topics This is a superior learning tool for upper-level undergraduates and graduate-level students in circuit design and optical fiber communication. Unlike other texts that concentrate on analog circuits in general or mostly on optics, this text provides balanced coverage of electronic, optic, and system issues. Professionals in the fiber optic industry will find it an excellent reference, incorporating the latest technology and discoveries in the industry.

Over the past twenty years, many low- and middle-income countries have experimented with health insurance options. While their plans have varied widely in scale and ambition, their goals are the same: to make health services more

affordable through the use of public subsidies while also moving care providers partially or fully into competitive markets. Colombia embarked in 1993 on a fifteen-year effort to cover its entire population with insurance, in combination with greater freedom to choose among providers. A decade later Mexico followed suit with a program tailored to its federal system. Several African nations have introduced new programs in the past decade, and many are testing options for reform. For the past twenty years, Eastern Europe has been shifting from government-run care to insurance-based competitive systems, and both China and India have experimental programs to expand coverage. These nations are betting that insurance-based health care financing can increase

the accessibility of services, increase providers' productivity, and change the population's health care use patterns, mirroring the development of health systems in most OECD countries. Until now, however, we have known little about the actual effects of these dramatic policy changes. Understanding the impact of health insurance-based care is key to the public policy debate of whether to extend insurance to low-income populations—and if so, how to do it—or to serve them through other means. Using recent household data, this book presents evidence of the impact of insurance programs in China, Colombia, Costa Rica, Ghana, Indonesia, Namibia, and Peru. The contributors also discuss potential design improvements that could increase impact. They provide innovative insights
