

*Personal Structures* presents an ongoing project that deals with questions concerning time, space and existence. This is the second book in the Time. Space. Existence series and involves the personal participation of 46 artists from different parts of the world, in a combination of internationally renowned artists and others whose oeuvre is less known. The concepts time, space and existence are highlighted in very personal ways and from unusual points of view. The many photographs of the artworks and encounters with the artists convey fascinating insights into their being, ideas and work. Seven art projects with established artists centralise their thoughts to a great extent. In addition, the book emphasises two Personal Structures exhibitions that were part of the Venice Biennale in 2011 and 2013. This publication also contains several interviews, artists' statements, and symposium contributions that discuss the theme of this book in detail. Personal Structures was initiated in 2002 by the Dutch artist Rene Rietmeyer. His observation that even in the most distant places artists are occupied with time, space and existence, led to the idea of bringing several of these artists together in publications, symposia and exhibitions. English and Japanese text.

This book addresses knowledge gaps in RARP in 3 key sections: 1) Step-by-step approach including multiple technique options and innovations, 2) Patient selection, safety, outcomes, and 3) Preparing the patient for surgery. The order is more based upon knowledge priority rather than a chronologic sequence in which part 3 would go first. Part two allows more summary and commentary on evidence and part three allows some creative content that is otherwise hard to find in one place—medical evaluations, imaging, clinical trials, patient education, etc. This textbook emphasizes content for the advanced skills surgeon in that multiple techniques are presented as well as state of the art evidence. The learning curve is addressed and the authors clarify how this text is useful for learners. The caveat is that they should be careful in patient selection and stick with what their mentors are showing them. With experience, they can then branch out into the many techniques presented here. Robot-Assisted Radical Prostatectomy: Beyond the Learning Curve will also have cross-over appeal for surgical assistants, physician assistants, nurses, and anyone else involved in the surgical care of prostate cancer.

During the academic year 2002-2003, the Faculty of Automatic Control and Computer Engineering of Ia-i (Romania), and its Departments of Automatic Control and Industrial Informatics and of Computer Engineering respectively, celebrated 25 years from the establishment of the specialization named Automatic Control and Computer Engineering within the framework of the former Faculty of Electrical Engineering of Ia-i, and, at the same time, 40 years since the first courses on Automatic Control and Computers respectively, were introduced in the curricula of the former specializations of Electromechanical Engineering and Electrical Power Engineering at the already mentioned Faculty of Electrical Engineering. The reader interested to know some important moments of our evolution during the last five decades is invited to see the Addendum of this volume, where a short history is presented. And, to highlight once more the nice coincidences, it must be noted here that in 2003 our Technical University "Gheorghe Asachi" of Ia-i celebrated 190 years from the emergence of the first cadastral engineering degree course in Ia-i (thanks to the endeavor of Gheorghe Asachi), which is today considered to be the beginning of the engineering higher education in Romania. Generally speaking, an anniversary is a celebration meant to mark special events of the past, with festivities to be performed solemnly and publicly according to a specific ritual.

This book offers an in-depth description of different groups of microbes (i.e. bacteria, protozoa, fungi and viruses) that exist in the rumen microbial community, and offers an overview of rumen microbiology, the rumen microbial ecosystem of domesticated ruminants, and rumen microbial diversity. It provides the latest concepts on rumen microbiology for scholars, researchers and teachers of animal and veterinary sciences. With this goal in mind, throughout the text we focus on specific areas related to the biology and complex interactions of the microbes in rumen, integrating significant key issues in each respective area. We also discuss rumen manipulation with plant secondary metabolites, microbial feed additives, utilization of organic acids, selective inhibition of harmful rumen microbes, and 'omics' approaches to manipulating rumen microbial functions. A section on the exploration and exploitation of rumen microbes addresses topics including the current state of knowledge on rumen metagenomics, rumen: an underutilized niche for industrially important enzymes and ruminal fermentations to produce fuels. We next turn our attention to commercial applications of rumen microbial enzymes and to the molecular characterization of euryarchaeal communities within an anaerobic digester. A section on intestinal disorders and rumen microbes covers acidosis in cattle, urea/ ammonia metabolism in the rumen and nitrate/ nitrite toxicity in ruminant diets. Last, the future prospects of rumen microbiology are examined, based on the latest developments in this area. In summary, the book offers a highly systematic collection of essential content on rumen microbiology.

'Clever... valuable introduction to the study of plant science.' - Gardeners Illustrated RHS Botany for Gardeners is more than just a useful reference book on the science of botany and the language of horticulture - it is a practical, hands-on guide that will help gardeners understand how plants grow, what affects their performance, and how to get better results. Illustrated throughout with beautiful botanical prints and simple diagrams, RHS Botany for Gardeners provides easy-to-understand explanations of over 3,000 botanical words and terms, and show how these can be applied to everyday gardening practice. For easy navigation, the book is divided into thematic chapters covering everything from Plant Pests, and further subdivided into useful headings such as 'Seed Sowing' and 'Pruning'. 'Botany in Action' boxes provide instantly accessible practical tips and advice, and feature spreads profile the remarkable individuals who collected, studied and illustrated the plants that we grow today. Aided by this book, gardeners will unlock the wealth of information that lies within the intriguing world of botanical science - and their gardens will thrive as a result. This is the perfect gift for any gardener. Contents Includes... The Plant kingdom Growth, Form and Function Inner Workings Reproduction The Beginning of Life External Factors Pruning Botany and the Senses Pest, Diseases and Disorders Botanists and Botanical Illustration ... And Much More!

A simple step-by-step guide to biodynamics This is the easy guide to getting luscious fruit and vegetables and gorgeous flowers by harnessing the rhythms of nature and using all-natural methods. For gardeners looking for a self-sufficient, ethical approach that produces great results, biodynamics is the ultimate form of organic gardening. DK's trademark visual approach and practical advice shows the home gardener how to get the best from their garden using biodynamic methods. Biodynamic Gardening is the perfect introduction to this ultra-green method, explaining how it works by improving soil health and performing key tasks at optimal times. Focused chapters show you what to do in the garden each season, including preparing and feeding the soil, caring for plants, keeping a balanced garden ecosystem, and harvesting at the best times for the best flavor. It also includes step-by-step features explain how to make the special soil preparations biodynamic gardening is so famous for.

A Place at the Altar illuminates a previously underappreciated dimension of religion in ancient Rome: the role of priestesses in civic cult. Demonstrating that priestesses had a central place in public rituals and institutions, Meghan DiLuzio emphasizes the complex, gender-inclusive nature of Roman priesthood. In ancient Rome, priestly service was a cooperative endeavor, requiring men and women, husbands and wives, and elite Romans and slaves to work together to manage the community's relationship with its gods. Like their male colleagues, priestesses offered sacrifices on behalf of the Roman people, and prayed for the community's well-being. As they carried out their ritual obligations, they were assisted by female cult personnel, many of them slave women. DiLuzio explores the central role of the Vestal Virgins and shows that they occupied just one type of priestly office open to women. Some priestesses, including the flaminica Dialis, the regina sacrorum, and the wives of the curial priests, served as part of priestly couples. Others, such as the priestesses of Ceres and Fortuna Muliebris, were largely autonomous. A Place at the Altar offers a fresh understanding of how the women of ancient Rome played a leading role in public cult.

A bucket list tour of Europe's private gardens Acres of white-blooming garden rooms on the island of Mallorca. A seven-tiered wonder of stone, plants, and water above Germany's Rhine River. The Garden of Cosmic Speculation in a quiet Scottish valley. These sumptuous landscapes are just three of the fifty destinations you'll visit on this exclusive tour of Europe's most beautiful private gardens. From Belgium to Ireland, Scandinavia to Wales, Carolyn Mullet is your guide through intimate retreats normally off-limits to visitors. Short profiles introduce the intriguing owners and rich histories of each garden and the land they inhabit. Among the featured gardens are works of eminent designers such as Tom Stuart-Smith, Andy Malengier, and Louis Benech. Whether you love exploring faraway places or creating your own landscape haven at home, Adventures in Eden is the ideal armchair getaway—glimpses into personal garden artistry that are sure to spark inspiration.

Whether you're interested in better performance on the road or extra horsepower to be a winner on the track, this book gives you the knowledge you need to get the most out of your engine and its turbocharger system. Find out what works and what doesn't, which turbo is right for your needs, and what type of set-up will give you that extra boost. Bell shows you how to select and install the right turbo, how to prep your engine, test the systems, and integrate a turbo with EFI or carbureted engine.

In the past decade, animal scientists have learned that administering recombinantly derived somatotropin (growth hormone) to cows improves milk production and that giving beta-adrenergic agonists to meat animals improves productivity and leanness. In order for these metabolic modifiers to yield benefits, however, sound management of the animals' nutrition is necessary. This volume reports on how you might have on nutrient requirements of domestic livestock, and what information should be developed further by investigators. The book explores the current understanding of the biology, structure, mechanisms of action, and treatment effects of somatotropin, beta-adrenergic agonists, and anabolic steroids. A companion volume to the Nutrient Requirements of Domestic Animals series, this authoritative text is essential reading for veterinarians, livestock farmers, and faculty and students in university animal veterinary science programs.

Spectral Feature Selection for Data Mining introduces a novel feature selection technique that establishes a general platform for studying existing feature selection algorithms and developing new algorithms for emerging problems in real-world applications. This technique represents a unified framework for supervised, unsupervised, and semisupervised

Packed with information on stripping and rebuilding, tuning, jetting, and choke sizes. Application formulae help you calculate exactly the right setup for your car. Covers all Weber DCOE & Dellorto DHLA & DCO/SP carburetors.

Taken as a whole, this series covers all major fields of application for commercial sensors, as well as their manufacturing techniques and major types. As such the series does not treat bulk sensors, but rather places strong emphasis on microsensors, microsystems and integrated electronic sensor packages. Each of the individual volumes is tailored to the needs and queries of readers from the relevant fields. The series also covers the integration of sensors into portable systems and the comfortable, easy-to-use sensors that allow patients to monitor themselves at home. The book covers such advanced topics as minimal invasive surgery, implantable sensors and prostheses, as well as biocompatible sensing.
